

CARBIOTIX

Leading the Charge in
Microbiome Healthcare Innovation

Elevating global prebiotic consumption with cutting-edge biotechnology,
upcycling excellence, and affordable diagnostic solutions

Carbiotix

Pioneering **Microbiome** Healthcare

Carbiotix is an award-winning biotechnology company pioneering microbiome healthcare through a portfolio of prebiotic modulators, upcycling services, and diagnostic testing services.

We are a company that is focused on continually innovating and improving our prebiotic products, how we deliver them to market, and how we verify their efficacy. In doing so, we are dedicated to delivering as much value as possible to our customers, partners, and other stakeholders.

Carbiotix's **mission** is to **increase** the consumption of **prebiotics** in people's diets by:

Manufacturing and sourcing the most effective and complementary prebiotics possible.

Selling and supporting the use of these prebiotics through as many forms and channels as possible.

Providing the most affordable, reliable and flexible testing service to validate the effect of prebiotics.

The **Smart** Prebiotic concept

In line with our ambition to be a pioneer in microbiome healthcare, Carbiotix has introduced a concept we call the "Smart Prebiotic": A Smart Prebiotic is a prebiotic ingredient that is upcycled, diversely sourced, customized, effective and validated. The building blocks of our Smart Prebiotic concept are Carbersol, LinkGut and NutraCycle.

Carbersol - A complex **soluble** fiber

Carbersol is an upcycled complex soluble fiber ingredient with complementary prebiotic properties and customised to meet specific customer needs. Sourced from a growing list of upcycled materials from the food & beverage industry, Carbersol has been designed to add value to existing and new nutraceutical or cosmetic products containing prebiotics.

Linkgut - Microbiome **testing** service

The LinkGut service is the lowest cost on the market for multiple samples, a highly reliable end-to-end service, and flexible to meet specific customer needs. Originally developed as a cost-effective consumer microbiome testing service, LinkGut is today utilised by customers carrying out clinical studies, research projects and companies offering microbiome health related products and services.

NutraCycle - **Upcycling** service

The NutraCycle upcycling service allows food & beverage companies to cost effectively manufacture their own prebiotic ingredients reducing the need for added sugars, texturizers and other additives. These prebiotic ingredients can be used to fortify new and existing more healthy products or be sold off-site, and waste streams will grow in value.
