

LINKGUT

Unlock the Future of Microbiome Testing

Experience unparalleled value, reliability, and flexibility in
microbiome testing and customer service

A **microbiome** testing service providing unmatched value

Customers of LinkGut will have access to an affordable, reliable and flexible microbiome testing service. Whether you are carrying out clinical studies, research or want to offer a branded microbiome test to your customers, LinkGut provides unmatched value allowing you to focus on analyzing results and serving your customers.

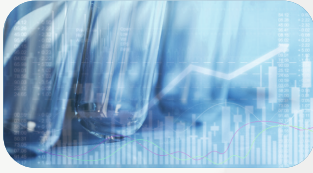

LinkGut test kits are both **IVDR** and **CE** compliant and adhere to EU standards for **quality, safety, and efficacy**.

LinkGut's IVDR certification means EU standards compliance, ensuring our diagnostics for microbiome health meet high standards for safety, quality, and accuracy. This achievement demonstrates our unwavering dedication to excellence and regulatory conformity, making LinkGut a trusted name in microbiome healthcare diagnostics.

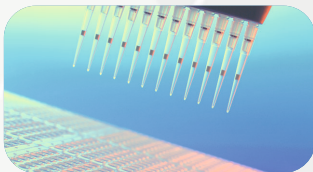

LinkGut holds the CE mark, reflecting EU compliance for health and safety in diagnostics. This allows for European distribution, affirming LinkGut's commitment to high standards in microbiome health solutions. It also signifies meeting essential regulatory requirements, highlighting LinkGut's role in advancing diagnostic excellence.

Affordable microbiome testing

LinkGut ensures the lowest cost per sample for multiple samples, providing for a cost-effective microbiome testing service. With no setup or annual service fees, making a decision to use the LinkGut service has never been so simple

Reliable service & data quality

The affordability of LinkGut service allows for multiple samples to be taken and thus an increased reliability of data. This focus on reliability is further reflected in the IVDR status of kits, standard operating practices in the laboratory, and dependability of logistics partners.

Flexibility for specific needs

The LinkGut microbiome testing service provides unmatched flexibility with regards to white label kits, testing options, number of samples and kit inserts. For businesses, the API integration allows for rapid, adaptable deployment, enabling you to tailor and modify your service.

Included in the package

-  Information leaflet and inserts
-  Customized ID
-  Sample collection tubes
-  Sample swabs
-  Stool sample collectors
-  Zip lock bag
-  Padded return envelope
-  Professional product pictures

Simplify **microbiome** testing with **LinkGut**

LinkGut streamlines microbiome testing for CROs, researchers, and businesses, eliminating the need for complex testing infrastructure. This approach allows our clients to focus on data analysis and applying insights to improve research, studies, or customer service.

Our service offers custom sample kits, allowing for personalization in branding and components to suit specific requirements. Orders are easily placed, and data is accessible through our user-friendly API and partner portal, which ensures compatibility and provides detailed documentation to enhance operational efficiency and user experience.

We ensure prompt order fulfillment, dispatching sample kits on the same or next business day for white-label customers, with global delivery within 2-4 business days. Customers return their samples for analysis, which our lab completes within 2-3 weeks. Results are made available through the client's chosen method or via our API, facilitating in-depth data interpretation and valuable feedback sharing.
